DISTINCTIVE FEATURES

- Does not require WI-FI connection - Nurse Assist is a standalone system that is connected via a single cable for power and data.

- Automatically detects resident's bed in a room. Even if the bed has been moved, no need to reconfigure the sensor.

- Can also be used in communial areas, like, Corridors, Dining Rooms and other Open Areas.

- No monthly subscription costs. Nurse Assist is supplied with a lifetime license and any software updates are included within the purchase price.

The main purpose of the system is to detect a person falling out of their bed or slipping and falling to the floor. It can also provide additional useful information: whether there is a staff member in the room (to track how much assistance the patient receives), whether the patient is in the bathroom and for how long (to monitor medication's influence on patient's comfort or their safety), whether the patient is sitting on the edge of their bed (especially useful when they should not get out of bed unassisted) or simply whether the patient is out of their room.

RELIABLE, INTELLIGENT, AUTOMATIC

Intelligent MOBOTIX sensor technology supports hospitals, nursing homes, and retirement homes effectively and cost-effectively in protecting patients and those in need of care – automatically around the clock.

Relief of the nursing staff

- Less alarm fatigue: avoid 99% of the false alarms of conventional systems
- Less time consuming tours
- More freedom for proactive care

Privacy protection

- The system analyzes live images without saving them (data protection)
- Remote view into the room exclusively at Alarm triggering and for verification
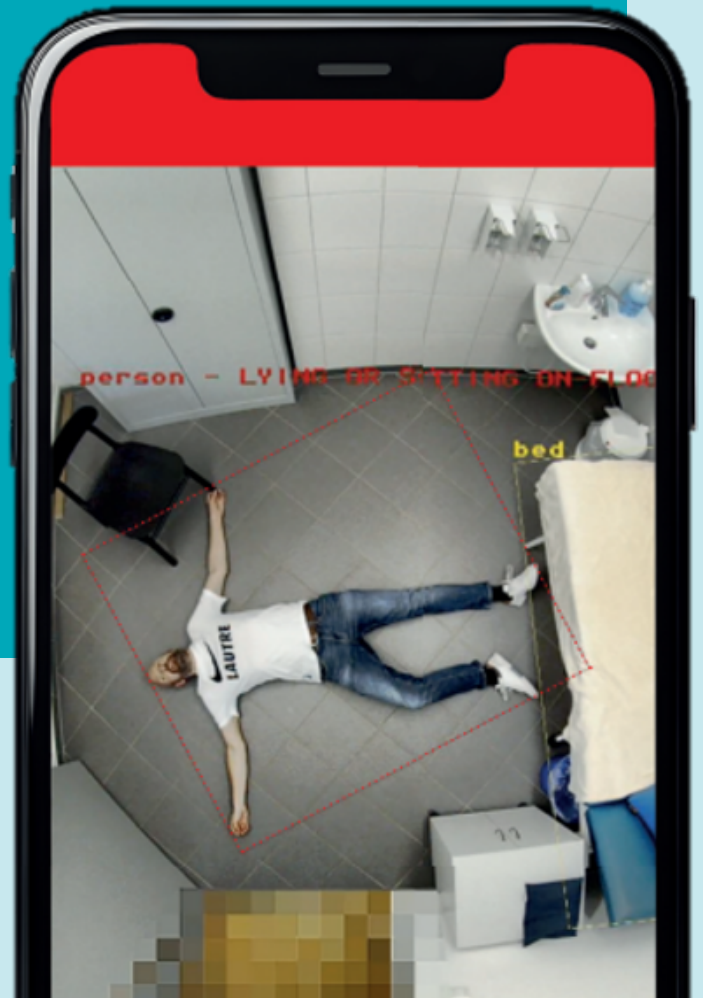

High efficiency

- Work more effectively
- Easy installation, integration and application
- Durability and long availability

Well-being of the patient

- Quick help in case of incidents
- More quiet: Patients/residents are not disturbed by rounds.
